

What is IgG Antibody Testing?

- The IgG serology test can detect antibodies to the COVID-19 virus; a positive antibody indicates a likelihood of exposure to the COVID-19 virus in the past or present.
 - **Testing Positive** for COVID-19 IgG antibodies does not mean that you can't get COVID-19 infection again or get sick from COVID-19 exposure.
 - **Testing Negative** for COVID-19 IgG Antibodies does not mean that you have not had, or currently do not have, the COVID-19 virus.
- You are still advised to follow all suggested public health measures, including:
 - Wearing a facial covering;
 - Practicing social distancing; and
 - Washing your hands frequently.
- If you remain symptom free, this protection can enable you to go back to work with a mask, and in accordance with Safer at Home guidelines.

Who qualifies for IgG Antibody Testing?

- ✓ Individuals who have been symptom free for at least 10 days prior to testing.
- Individuals who **do not meet** the above qualification for IgG testing but currently have active symptoms of COVID-19 (fever/chills, cough, shortness of breath) may still receive swab testing at STRIDE's Drive-Thru testing locations.
- If you still have questions or do not meet any of the above criteria, please call STRIDE and schedule an appointment with a medical provider.

STRIDE's Mobile Health Unit is here to partner with your organization!

Schedule onsite IgG Antibody Testing for your employees by emailing:

Mobile.HealthUnit@stridechc.org
